

# Mini Touchscreen Controller

## Now Available

After years of customer feedback, we're bringing touchscreen convenience to our smaller kiln models. The new Mini Touchscreen Controller is available on Skutt Firebox, GlazeTech, and HotStart kilns.

Upgrade kits (instructions included) are also available for existing units, making it easy to add this innovative control to your current kiln.

**Touchscreen convenience** Like your smartphone, the Mini Touchscreen navigates with a touch on a 2" customizable color screen. Add a personal touch to your kiln!

**Stay Connected with Wi-Fi** Built-in Wi-Fi means free firmware updates, giving you a kiln controller that evolves with you.

**Remote Monitoring with Our App** Similar to our KMT/GMT Controller, a free app works with Wi-Fi, allowing you to monitor kiln temperature and status from anywhere. Skip the cross-town trips—stay connected remotely!

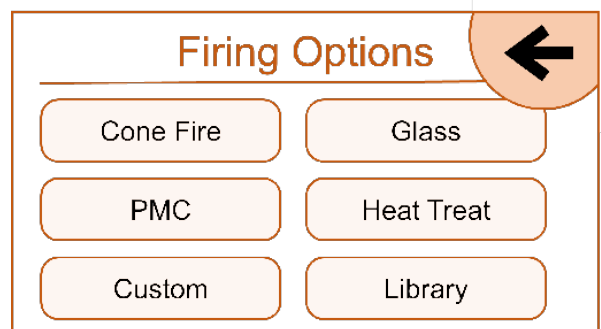

## Enhanced Firing Options

Each firing program is easily customizable with settings like Preheat, Firing Speed (Slow, Medium-Slow, Medium, or Fast), and Hold Time at peak temperature. The Delay Start feature also allows you to schedule your firing for a later time, adding flexibility to your workflow.

**ConeFire** - All the features of our larger controllers, with easy-edit screens and real-time data display.

**Glass Fire** - Tailored programs for glasswork, with new options like casting, slumping, and fusing.

**Precious Metal Clay (PMC)** - Firing options for gold, silver, and copper projects.

**Heat Treat** - Perfect for metalwork, with custom tempering and annealing programs.

**Custom** - Save up to 30 unique firing schedules to fit your creative needs.

**Library** - Access preloaded options.

## Expanded Diagnostics and Reporting

The diagnostics menu includes a built-in current sensor and other advanced troubleshooting options to help maintain your kiln's performance.

**Graphing** - View real-time progress and review past firings.

**Data Logging** - Keep detailed firing records, with optional KilnLink® Premium storage.

**History** - View the last 10 firings on the screen or export logs with a QR code scan.

## Upgrade Kit for Easy Retrofitting

Already own a Skutt kiln with a three-button controller? The Mini Touchscreen Upgrade Kit makes it simple to add this new functionality. Designed for easy DIY installation, the kit includes all the components you need, along with step-by-step instructions for a smooth setup. Enjoy all the convenience of the Mini Touchscreen without replacing your existing kiln.

## Available on Small Skutt Kilns

The Mini Touchscreen controller is available on smaller Skutt kiln models, including:

### Ceramic/Glass Kilns:

FireBox 8x6

Firebox 8x4

### Ceramic Kilns:

GlazeTech

### Glass Kilns

FireBox 14

HotStart Pro
